Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.
2. This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.
3. In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 104-109, 111, 112, and 117, drawn to a heat-transfer label.

Group II, claim(s) 149, 150, and 157, drawn to a heat-transfer label.

Group III, claim(s) 158, drawn to a heat-transfer label.

Group IV, claim(s) 159-163, drawn to a heat-transfer label.

4. The inventions listed as Groups I-IV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: evidence of lack of unity between the groups is found in USPN 5,296,444 to Saiki et al., which discloses a heat-transfer label (*heat-melt transfer medium, title, also see Fig. 4*), a support portion (*foundation 1*), and a transfer portion (*includes release later 2, heat meltable ink layer 3, and adhesive layer 4*). The transfer portion is positioned over the support portion for transfer of the transfer of the transfer portion from the support portion to an article of fabric (*see Fig. 5*) under conditions of heat and pressure (*the two heating plates 11 press together to transfer*). The transfer portion comprises a heat-activable adhesive layer (*the adhesive layer 4 melts when heated*), and because the adhesive layer has a thickness between 0.5 - 5 μ m, the roughness of the adhesive layer must be no more

than 5µm. There is also an ink design layer (*dye image 10, Fig. 5*) can be in the form of a marking (*letters, symbols, patterns, column 1, lines 6-11*). The markings are applied as pixels (*ink dots, column 2, line 14*), which are a form digital codes which may encode information (*the presence of a dot is a one, the lack of a dot is a zero*). Although the markings, such as letters, are readable by the human eye, the pixels are very small to form a smooth letter and as such are only readable via a digital reader, and are inconspicuous to the naked eye.

5. These disclosed features are the entire subject matter of instant claim 158. The subject matter of claim 158 is the corresponding technical feature common among groups I, II, III, and IV. As such, the corresponding technical feature is not a corresponding special technical feature that defines a contribution over the prior art.

6. No telephone call was made to applicant due to the complexity of the restriction requirement.

7. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

8. The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

9. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
